

# Beloader HID Update/Config Instruction

**please unzip this file first, otherwise can't download correctly**

This HID update is new way to update and config the beloader. It fix problem which some beloader user get update/config problem before. The step is:

## **No.1 Step: Upgrade the Beloader HID firmware 20220921.1940**

A: Hold pair button and insert beloader into PC, use old way to update this

HID firmware 20220914.2254 .

B: After update HID firmware 20220914.2254 successfully, unplug beloader,

And insert into PC directly(**don't hold pair button**), the light should turn into green.

C: Enter update mode again(hold pair button and insert PC), uninstall super

manager driver if installed before, [here is the way](#). Maybe need uninstall few times to be sure uninstall successfully.

**User can ignore this step first, if can't connect with HID, then do this C step**

## No.2 Step: Upgrade Beloader to Normal firmware like WIFI or LAN firmware

A: Hold pair button and insert beloader into PC, open index.html with **Microsoft Edge** browser.

User should enter following page:
